

CK18000

EVAPORATIVE COOLER

The Cajun Kooling CK1800 portable evaporative air cooler is designed to cool off outdoor living and work areas such as home patios, restaurant patios, tailgating events, outdoor weddings, warehouses, factories, and many more. These coolers run on a standard 110-Volt outlet and water. The specially designed cooling pads all around the cooler help to naturally cool the air down 10-25 degrees, even in very humid climates like the South. This portable and easy-to-maintain unit can cover an average area of 1800 sq. ft.
